Modeling, Forecasting & Decisionmaking

INTA 6004A  Fall 2018  Th 6-8:45 pm  Habersham G-17

Peter Brecke
phone: 404-894-6599  Office: Habersham 215
email: peter.brecke@inta.gatech.edu  Hours: Th 12:00-1:15, or by appt.

The purpose of this class is to give you an understanding of how to use computer simulations as a tool to address issues in international affairs. Computer simulations are computer programs that have at their core simplified models of our world. Different models vary in the degree and nature of their abstraction from the “real” world, but they share the goal of trying to help us better understand the complex structures and dynamics that we observe around us. Although simulations in international affairs are often used to make projections into the future, they should not be thought of as computerized “crystal balls.” Their best use is to augment and improve our thinking about how the world works by performing computational tasks for which our minds are ill-suited.

One component of this class will be to examine different models or modeling systems as examples of the quite different ways to do computer simulation in international affairs. We will look primarily at what are called system dynamics models and to a lesser degree agent-based models. We will look at different aspects of these models or modeling systems such as their validation, how they relate to theory, and how they are used to support decision making.

A second aspect of the class is that we will spend time learning how to use the STELLA software you will employ to make your own simulations. STELLA is on all of the G-17 and Habersham lab computers and on the IAC virtual lab (vlab).

The true core of the class, however, is the development of your own computational (simulation) model. There is nothing like making your own simulation to understand how it should be done. You will learn how to think in terms of dynamic processes, a useful skill. You can either make your own model or make a model with one or two other students. You should think of this part of the class as very much a one-on-one (or close to that) learning experience. I am there to help you make your model.

There are few computer exercises through the progression of the class, and they can be found in the schedule below. The culmination of the class is your presentation of your final (or near final) model and a paper describing it. That final paper should be in the range of 2500-3000 words. There is also an interim version of the final paper (1000-1500 words) and a preliminary presentation of the model.
Texts

Peter Bernstein, *Against the Gods*.

Joshua M. Epstein and Robert Axtell, *Growing Artificial Societies: Social Science from the Bottom Up*.

Hughes, Barry B. et al, *Reducing Global Poverty* (on T-square)

Donella H. Meadows, Jorgen Randers, and Dennis Meadows. *Limits to Growth: The 30-Year Update*.

Weart, Spencer, *General Circulation Models of Climate*, a webpage that can be found at: [http://www.aip.org/history/climate/GCM.htm](http://www.aip.org/history/climate/GCM.htm)

Schedule

Aug. 23      Introduction to Class and Stella Software

Aug. 30      Features of Stella Software and an Introduction to Models
Read:        *Against the Gods* (optional)

Sept. 6      Alternative Computational Modeling Techniques
Read:        From System Dynamics and Discrete Event... paper

*Due on the 6th: First Stella exercise*
Sept. 13  Early Models of the World  
Read:        Limits to Growth 

Sept. 20  State of the Art Social Global Models  
Read:        Reducing Global Poverty  
The MIT Emissions Prediction... monograph (optional)  
Due on the 20th:  Second Stella exercise 

Sept. 27  What the Climate Modelers Have Done  
Read:        General Circulation Models of Climate 

Oct. 4   Business Uses of System Dynamics Models  
Read:        The Fifth Discipline  
Due on the 5th:  Third Stella exercise 

Oct. 11  Making Your Own Simulation Model: Designing the Model Structure  
Read:        What you need/want from STELLA online help/tutorials 

Oct. 18  The Representation of Theories in a Model 

Oct. 25  Empirical Validation of Processes Within a Model  
Read:        What you need/want from STELLA online help/tutorials  
Due on the 25th:  1st model presentation and preliminary description of model 

Nov. 1   Troubleshooting Your Own Simulation Model  
Read:        What you need/want from STELLA online help/tutorials 

Nov. 8   NO CLASS AS I HAVE TO REPRESENT GT AT A MEETING IN SAVANNAH, GA 

Nov. 15  Agent-based Modeling: EARTH and Sugarscape  
Read:        Stoll and Cusack and Stoll articles on T-square  
Growing Artificial Societies, pp. 1-178 

Nov. 22  NO CLASS - Thanksgiving 

Nov. 29  Presentation of Models to Class 

Dec. 10  Due Date for Final Paper and Model 

Determination of Final Grade 

Computer exercises 10% each x3  
1st model presentation 10%
